Orbograph 10th Annual Users Conference a “Hit” with Client Testimonials and Strong Business Roadmap

‘World Series of Recognition’ Won by Republic Bank as Highest Performing Customer

Billerica, MA, October 31, 2007 – Orbograph Ltd., today announced the successful completion of its 10th Annual Technology and Users Conference held in San Antonio, TX on October 18-19, 2007. Represented by nearly 50 business partners, banks, and industry consultants throughout the U.S., the conference featured an information-packed program of client case study testimonials and Orbograph business roadmap presentations.

Keynote speakers, Steve Ledford and Marcy Ellis Williams of Global Concepts presented an updated Image POD analysis detailing the labor cost trends for centralized, back counter, and front-counter capture scenarios. The analysis illustrated trends in the check processing workflow of Image POD, including a 22% labor cost increase since 2001. The ability to reduce labor costs by moving toward a hybrid capture model was illustrated, transitioning from back-office to branch and then teller capture.

User presentations by Eric Foust of KeyBank and Fred Campos of AudioTel illustrated two very different distributed capture methodologies for both high and low volume distributed processing environments. KeyBank recently announced an agreement to use Orbograph’s OrboCAR Accura recognition with image quality and usability assurance (IQUA) for its cash vault operation on its enterprise recognition platform. This cost effective solution for high volume vault processing utilizes a VMWare configuration. AudioTel presented Orbograph’s embedded BPO (business process outsourcing) model, Key-Pay Convene, as an innovative methodology to differentiate its merchant capture (remote deposit capture) application for keyless merchant capture.

Jim Casale of Fidelity National Information Systems (FNIS) also presented trends in outsourcing, highlighting the addition of an estimated 205 new clients in 2007. Incremental data entry and balancing labor requirements were absorbed via the use of the Orbograph APEX system. Orbograph BPO solutions enable FNIS to continue aggressive growth strategies with a very cost effective price per item and minimal staffing overhead.

Orbograph announced Republic Bank as the winner of its 2007 World Series of Recognition program. Republic Bank presented its proactive document recognition program which enabled a read rate of 85.5% with an overall misread of 0.39% (also referred to as an accuracy level of 99.61%). When utilizing Orbograph’s APEX product, Republic Bank has an overall read rate of 97%. “The bank is always striving to increase performance, but with a strong eye on accuracy. We found this is our best balance between read rate and misread settings to minimize labor costs within the system,” stated Mike Long, Vice President of Republic Bank.

Barry Cohen, General Manager of Orbograph Ltd. and President of Orbotech, Inc., stated, “In addition to the exceptional level of information shared by our clients during the conference, we were pleased to present Orbograph’s roadmap which has been designed to proactively support increased business partner revenue and to deliver very high value to the end-user.”

Orbograph will be hosting a post-conference webcast on November 6, 2007 for partners and clients who were unable to attend. For more information, please visit www.orbograph.com.

About Orbograph

Orbograph Ltd. (www.orbograph.com), a subsidiary of Orbotech (NASDAQ/NM SYMBOL: ORBK), is a leading developer of recognition solutions for the U.S. check processing and business process outsourcing markets. Orbograph’s technologies are in use at hundreds of banks, financial institutions and service bureaus across North America, processing millions of documents each day. Through its recognition solutions, fraud detection, business process outsourcing

technologies and image quality assurance applications, Orbograph enables customers to reduce costs, improve operational efficiencies and achieve rapid ROI.
