Orbograph and ExactData Partner to Improve Data Center Quality Keyer Quality Control (KQC) Streamlines Data Entry Quality Certification

Billerica, MA, April 17, 2007 – Orbograph Ltd., a leading developer of automated recognition software and supplier of web-based, remote data entry/repair services, and ExactData, LLC, a certified integrator of Advanced Document Imaging's Data Quality Management technologies, today announced that ExactData will utilize Orbograph's Key-Pay® Convene™ infrastructure for its Keyer Quality Control (KQC), a new solution that will streamline and optimize data entry performance evaluations, training and certification processes for data centers and keying staff. KQC will be marketed and sold worldwide by ExactData, LLC.

Orbograph and ExactData have integrated Orbograph's Web-based Key-Pay Convene data entry/reject repair solution and Advanced Document Imaging's Digital Test Deck, DTD® technology, two best-of-breed components, to achieve this solution. DTD technology provides program-engineered test tools of unlimited size and variation, and automates the mass creation of test documents of any form or file type that simulate "real life" environments. The test documents are generated with realistic handprint and cursive data (image or paper). Document content adheres to the client's business rules and the generated format ("look and feel") follows the client's image capture guidelines.

Leveraging Orbograph's patented Key-Pay technology, Key-Pay Convene is a fully internet-based, distributed data entry/reject-repair solution, which is closely integrated with state-of-the-art, advanced OCR/ICR tools. It streamlines business processes, reduces costs and increases the accuracy and efficiency of automated forms processing activities. Key-Pay Convene works by automatically sending image "snippets" of only those individual fields in a form that contain characters which cannot be read by the recognition engine, to a virtually unlimited pool of data repair personnel. In order to satisfy the highest quality demands, Key-Pay Convene provides constant keyer monitoring and verifies output accuracy and throughput.

Keyer Quality Control certification allows data centers and their clients to assess output quality based on measurable skill tests. Real-time testing can also be used for skill-based resource allocation, leading to higher productivity and employee satisfaction. Customized KQC provides reduced training costs due to a closed feedback loop for root cause failure analysis and continuous process improvement while working with production-simulated documents.

"The ability to ensure that quality levels are being met or exceeded is very important for both data centers and the businesses using them," said John Dawson of ExactData, LLC. "We expect that Keyer Quality Control will quickly become accepted as the keying quality standard for data centers around the world. Utilizing Key-Pay Convene's web based processes to make the standardization process globally available with no infrastructure costs, provides us with a tremendous competitive advantage."

"We are very excited about ExactData's choice of Key-Pay Convene for KQC's underlying infrastructure" added Roni Boker, Product Manager for Key-Pay Convene. "It validates Convene's quality methodology, which allows it to monitor on-going keyer performance tracking and consequently provide the best possible output quality."

About Orbograph

Orbograph (www.orbograph.com), a subsidiary of Orbotech (NASDAQ/NM SYMBOL: ORBK), is a leading developer of recognition solutions for the U.S. check processing and business process outsourcing markets. Our technologies are in use at hundreds of banks and financial institutions across North America, processing millions of items each

day. Through our recognition solutions, fraud detection, business process outsourcing technologies and image quality assurance applications, we enable customers to reduce costs, improve operational efficiencies and achieve rapid ROI. For more information please contact Roni Boker at roni.boker@orbograph.com or 978.901.5048.

About ExactData, LLC

ExactData, LLC (www.exactdata.net) integrates data quality management technology for measurement and benchmarking of imaging system performance. An output is a robust Return on Investment analysis that not only justifies the investment required but also the ability to differentiate the solution from the competition. Operationally, ExactData enables the application of statistical process control to document imaging and conversion processes, audit services operations and technically differentiate competitive bids. ExactData, LLC is a certified integrator for Automated Document Imaging, ADI, LCC and other technology partners. For more information please contact John Dawson at exactdata@earthlink.net or 585.781.4220.

About ADI, LLC

ADI, LLC (www.adillc.net) is a trusted provider of unique and proprietary Data Quality Management technology and services developed through ten years of government funded research and development and does not resell other Solution Provider's products. ADI, LLC independently helps customers and their integration channels produce the most accurate and efficient data capture systems.
